

Mission Statement

To provide simplified yet technologically advanced security solutions, always with a strong emphasis on customer support.

The Company

Established in early 1991, Habtech Communications develops, manufactures and provides support services for a wide range of integrated systems, products and software for security, communications, building automation and industrial control applications.

Our commitment to delivering reliable and expandable security solutions and our highly skilled work force has enabled us to grow and serve a customer base which is international in scope.

Products

Habtech designs and manufactures its products to suit the needs of its customers. The ST2000 Pro is our most advanced version from The Smart Touch™ family of security and building automation products.

Habtech products incorporate the open standard of LonWorks® technology and offer customers the economies and convenience of systems interoperability and multi-vendor product integration. Our product development strategy of incorporating distributed systems architectures, standards-based technologies, user-friendly operator interfaces and ease of installation and maintenance, ensures maximum flexibility in meeting current needs, while providing an upward migration path to accommodate future growth.

Whether your need is for a new installation of an integrated security management system or for an upgrade of an existing system, The Smart Touch™ family of products from Habtech Communications Inc. will meet your requirements.

Delivering the vision of High Performance Integrated Security Management Systems since 1991.

The Smart Touch[®] 2000 PRO

A member of The Smart Touch[®] product family, the LonWORKS[®] technology based ST2000 PRO Security Management System brings intelligent distributed peer to peer control to security applications through easy-to-use and reliable hardware and software features. With its flexible system architecture and with the system integration capabilities of Habtech Communications Inc., the ST2000 PRO is ideal for new installations and for retrofits of existing buildings in commercial, institutional and industrial markets.

The system software is Windows[™] based, designed to offer a number of standard features and to support customization to suit specific applications.

- Standard features include access management, event logging, alarm management, maintenance and system configuration.
- Customized features include graphical displays of building maps, user databases and customer specified interactive interfaces for quick, single touch operation of critical or commonly used functions.

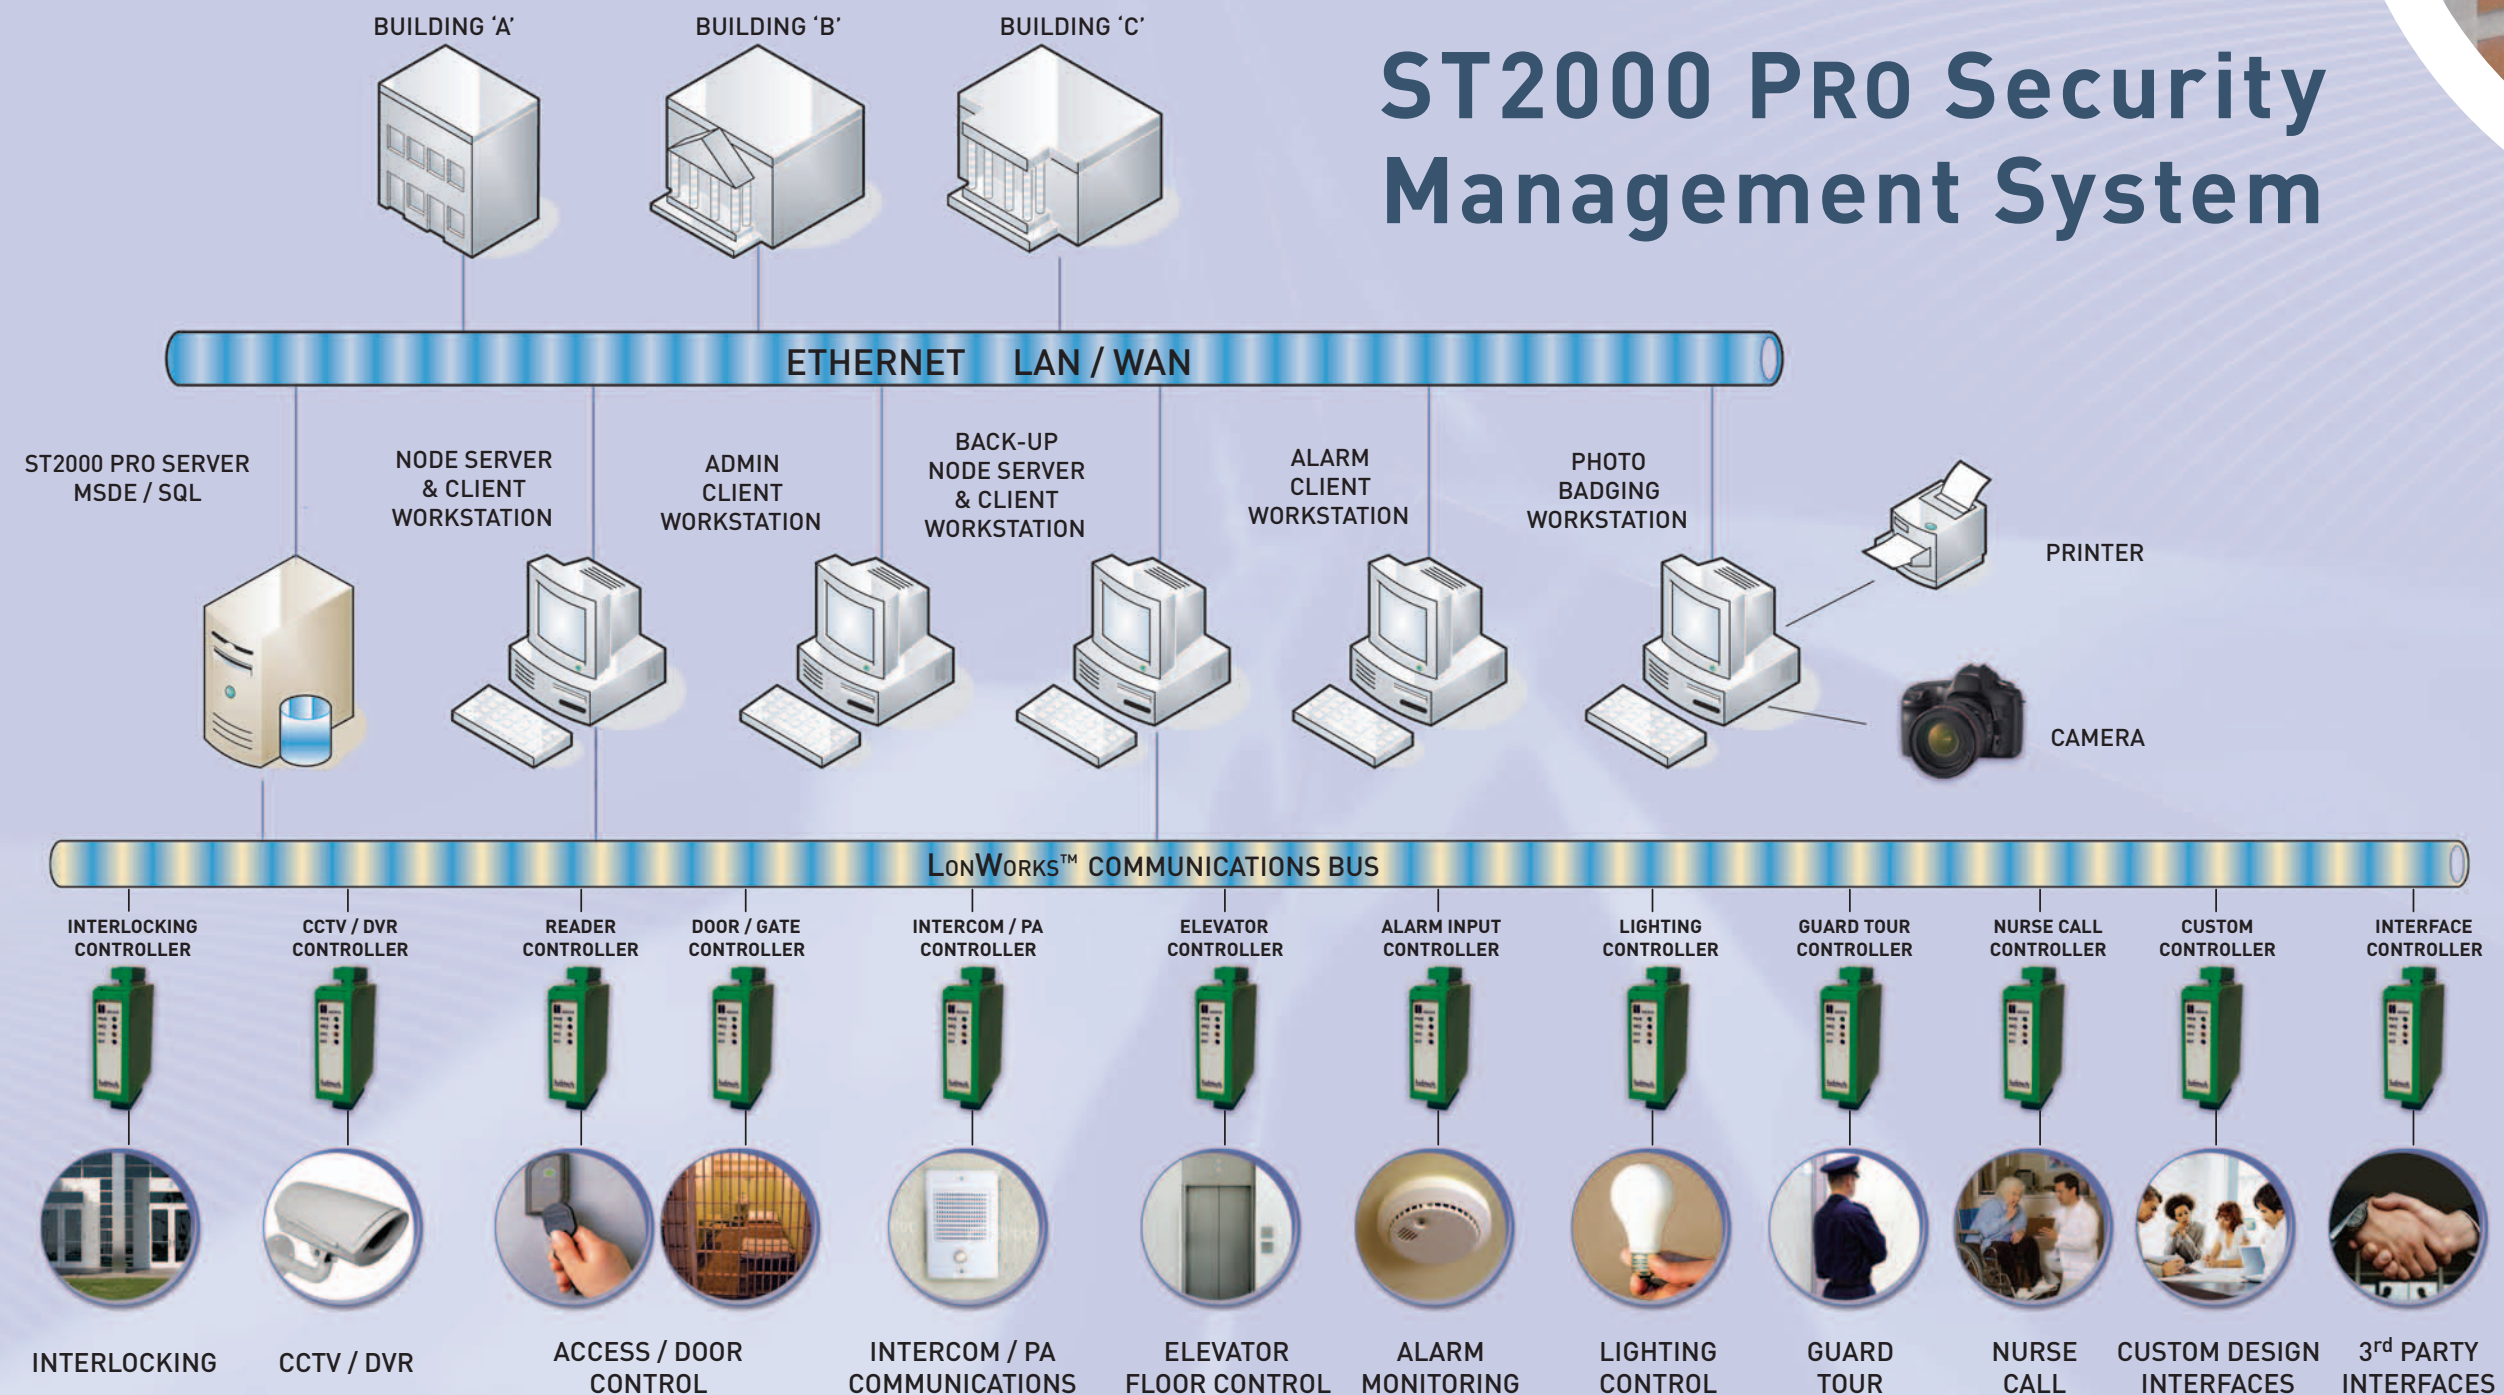

Features

- Multi-Vendor Product Integration
- Open System Architecture
- Interoperability
- Distributed Intelligent Controllers and Consoles
- Graphical User Interfaces
- Touch Screen Interface
- Flexible System Architecture
- Ease of Installation, Operation and Maintenance
- High Reliability and Availability
- Suitable for Retrofits and New Installations
- LonWORKS[®] and Windows Technologies
- Easily Upgradable and Expandable
- Activity & History Reports
- Operates as stand-alone system or multiple client architecture (LAN, WAN)
- Full system redundancy
- Built-in diagnostics for automatic fault detection, reporting and restoration
